

The Art of Modelling

NLP Master Practitioner Training 2007

Modelling is at the heart of NLP. NLP is the study of human excellence and Modelling is the process that makes explicit the thinking and behavioural patterns of successful people in any field.

Modelling can most simply be defined as the process of replicating human excellence. Explanations of *why* some people excel usually cite inborn talent. NLP goes beyond this simple explanation by exploring *how* we can excel as quickly as possible. By using our whole mind-body system in the same way as peak performers, we can immediately increase the quality of our actions and our results, and accelerate learning.

On this 20 day advanced program, starting the first weekend in February 2007, at a total investment of R9 500 (terms available), you will discover:

- ❖ Implicit and explicit Modelling skills.
- ❖ Advanced strategy elicitation, design and installation.
- ❖ The power of Metaprograms and the crucial role of Values and Beliefs.
- ❖ How to enhance the effectiveness of your Modelling through the process of co-Modelling.
- ❖ The use of “pattern diaries”, a method of formally structuring patterns elicited on a Modelling spreadsheet.
- ❖ How to design and deliver trainings to install the Modelling skills elicited.
- ❖ Advanced NLP interventions that are at the cutting edge of modern NLP such as:
 - The Experiential Array
 - Modelling with Meta-States
 - Developmental Behavioural Modelling
 - Design Human Engineering
 - New Code NLP and more.
